

MASHVISOR

Real Estate & Rental Data Infrastructure

Investor-grade intelligence powering property, rental, and market decisions

■ AI-native, API-first platform

■ 10+ years of U.S. data intelligence

■ Built for enterprise decisioning

Rental performance has become a critical input to modern real estate decision-making.

Mashvisor provides a consistent, explainable rental intelligence layer that integrates into enterprise workflows.

Decisioning needs real outcomes

Investor yield, affordability, and risk increasingly depend on observed rental outcomes (STR + LTR), not static assumptions.

Markets move faster than reports

Rental supply, pricing, and demand dynamics can shift quickly. Teams need timely signals that are easy to audit and operationalize.

Fragmentation creates blind spots

Multiple sources with inconsistent definitions lead to mismatched decisions across underwriting, analytics, and product experiences.

What Mashvisor Is

Mashvisor is an AI-native real estate data and analytics platform designed for investment and decision workflows.

Property-level intelligence

Address resolution, normalized attributes, and investment metrics.

Observed rental performance

STR and LTR performance metrics that support analysis and decisioning.

Comparable analysis & market trends

Explainable comps plus neighborhood and market signals.

Enterprise delivery models

APIs, bulk exports, and custom datasets aligned to partner schemas.

Designed to integrate into existing systems, enriching decision workflows rather than replacing them.

Nationwide U.S. coverage across residential and rental markets, designed for enterprise-grade scale.

160+ millions

Residential property index

20+ millions nationwide

STR + LTR market coverage

24 - 36 mo

Historical performance depth

Coverage footprint (illustrative)

Designed for enterprise use

- Continuous refresh and monitoring
- MLS daily updates
- 36-48 hr. STR updates
- Consistent definitions across markets
- Metadata to support auditability
- Integration-ready schemas
- Aggregated analysis on different levels and postal codes

Mashvisor spans the full investment intelligence stack.

Property Intelligence

Address-level attributes, normalization, and investment metrics, comps, tax and price histories, and photos nationwide.

Rental Performance (STR + LTR)

Occupancy, ADR, revenue estimates, and trend signals.

Comparable Analysis

Dynamically generated, explainable comp sets for benchmarking, and multiple filtering criteria

Market & Neighborhood Trends

Pricing, demand, and seasonality at ZIP / neighborhood resolution includes all meta data insights, and aggregated investment analysis and histories.

Forward-Looking Signals

Pacing and early indicators to support proactive decisions.

Address-level insights designed for underwriting, valuation, and analysis.

- Address-based lookup and normalization
- Property attributes and structure details
- Photos
- Transactions, sales, and tax histories
- Price and rent estimates
- Investment metrics (cash flow, yield, cap rate)
- Consistent, explainable definitions
- Comparable listings
 - STR comps
 - LTR comps
 - Sales comps

Example output (schema view)

```
{
  "homeType": "Single Family Residential",
  "property_type": "Residential",
  "property_sub_type": "Single Family Residence",
  "beds": 4,
  "num_of_units": null,
  "favorite": null,
  "status": "Active",

  "primary_image": ".....f3778549048r.jpg",
  "images": [..],
}
```

Observed performance across U.S. short-term rental markets.

Core metrics support both historical analysis and operational decisioning:

- Occupancy and utilization
- Average Daily Rate (ADR)
- Monthly / annual revenue estimates
- Seasonality and trend signals

Illustrative trend views

Long-Term Rental Intelligence

Stable rental signals that complement short-term performance data.

Long-term rental intelligence provides context for stability, affordability, and risk-aware decisioning:

```
"months": [  
  {  
    "year": 2026,  
    "month": 1,  
    "zero_room_value": 2740,  
    "one_room_value": 3292,  
    "two_room_value": 4992,  
    "three_room_value": 5760,  
    "four_room_value": 6240  
  },  
  {  
    "year": 2025,  
    "month": 12,  
    "zero_room_value": 2385,  
    "one_room_value": 2917,  
    "two_room_value": 4992,  
    "three_room_value": 5760,  
    "four_room_value": 6240  
  },  
]
```

- Rent estimates and neighborhood trends
- Yield and stability metrics
- Comparative STR vs. LTR performance context
- Consistent definitions across geographies

Illustrative rent trend snapshot

Comparable Analysis (Comps)

Explainable comparable selection for valuation and benchmarking.

Subject property

Target address → normalized entity

Comp selection logic: STR,
LTR, and sales!

	Comparable #1	High similarity
	Comparable #2	High similarity
	Comparable #3	Relevant
	Comparable #4	Relevant
	Comparable #5	Relevant

What enterprises care about

- Explainable selection logic and filters
- Outlier identifications
- STR and LTR comparable sets
- Distance / similarity characteristics
- Designed for benchmarking and valuation workflows

Outputs can be delivered as comp sets, metrics, and metadata via API or bulk.

Example endpoint for API:

<https://www.mashvisor.com/api-doc/#list-comps>

Market & Neighborhood Intelligence

Granular insights at ZIP and neighborhood-level resolution.

Market signals help teams understand pricing, demand, and seasonality patterns at scale.

- Pricing and rent trends
- Supply-demand dynamics
- Seasonality and market pacing
- Investor activity indicators
- Walkscore
- Schools
- Revenue and expenses analysis
- Optimal Strategy and insights

Illustrative market index trends

Built for accuracy, transparency, and enterprise auditability.

Data integrity and explainability are foundational:

- Combination of public, observed, and modeled sources
- Deduplication, normalization, and entity resolution
- Continuous QA and anomaly detection
- Metrics designed for enterprise consumption

Pipeline (high level)

Enterprise-friendly outputs include: consistent definitions, timestamps, lineage metadata, and validation signals to support downstream governance.

Delivery & Integration

Built to plug directly into partner systems and workflows.

Flexible delivery models to meet engineering and product needs:

REST APIs

Address lookup, metrics, comps, market signals.
Predictable schemas and versioning.
Reso listings standards

Bulk Data

CSV / XLSX / JSON exports.
Designed for pipelines and warehousing.

Custom Datasets

Schema alignment, curated cuts, and partner-specific fields.

Integration pattern (illustrative)

Partner platform

Underwriting • Analytics • Product

Mashvisor Intelligence Layer

APIs / Bulk Data feeds

Common enterprise workflows supported by Mashvisor data.

Underwriting support

Rental performance context to complement valuation and risk workflows.

Portfolio monitoring

Track performance changes, market shifts, and evolving yield dynamics.

Market discovery

Identify expansion markets, opportunity zones, and demand patterns.

Embedded analytics

Power partner-facing experiences with consistent metrics and signals.

These use cases are modular, teams can start with a narrow dataset and expand over time.

Enterprise teams choose Mashvisor for decision-ready data and partner-friendly delivery.

High accuracy

Transparent definitions, metadata, and traceable signals, with outliers filtered and continuously updated models powered by real-time data.

Flexible engagement and support

APIs, bulk exports, or custom datasets aligned to your roadmap, with support to resolve issues in under 48 hours.

Fast integration

Partner-ready schemas, docs, and iteration cycles built for product teams.

Enterprise mindset, and benchmarked pricing

Designed to complement existing systems and governance.
Transparent, usage-based API pricing that scales with your growth.

Explore alignment

A short working session typically covers data fit, delivery, and pilot scope.

1) Data walkthrough

Coverage, metrics, definitions, and sample outputs.

2) Use-case mapping

Identify where signals complement your workflows.

3) Integration plan

API / bulk options, refresh cadence, and pilot scope.

Ready when you are.

We can share a sample data pack and propose a lightweight pilot aligned to your priority workflow.

→ Optional: Book a 20-min alignment call → <https://calendly.com/mashvisor/partner-with-mashvisor>
